

CLARVERGENCE FOR CASE MANAGEMENT

The power of individualization.

BACKGROUND

ClarVergence for Case Management is a proprietary software application designed to efficiently manage the data volumes and complexities associated with multi-year, mass tort cases. We recognize that just as no two snowflakes are exactly alike, no two cases are exactly alike either. In order to make your “massive manageable” and your “complex consistent,” you need a product that couples individualization with speed and security.

ClarVergence offers counsel across multiple firms and locations the ability to compile, review, research and collaborate in a highly secure, web-based environment. Users have access to a central repository that is highly customizable and that can handle the unique data and file collection requirements of individual cases.

ClarVergence for Case Management is a hosted solution, managed in our Tier 3 Data Center. This hosted approach enables you to leverage our IT experience, and alleviates the burden associated with maintaining in-house systems, servers and networks of this size. It also affords you a dynamic application that can scale and adapt to the inevitable changes that arise throughout the lifecycle of complex litigation.

KEY BENEFITS OF CLARVERGENCE-CM

Highly scalable for complex and multi-district litigation

Web-based user access

Custom-defined security down to the field level

Central or dispersed intake and editing options

Automatic document distribution notification

Client-defined relationships between collections

Robust searching and reporting

User collaboration of work product and case knowledge

High-speed batch printing to client-defined remote locations

CLIENT DRIVEN SITE DESIGN

The reality of complex litigation is that “off-the-shelf” solutions simply do not fit. Each case will have a unique set of data and file collections with a unique set of relationships between them. Additionally, because this type of litigation is dynamic, the system needed to manage it is never really “finished.” As the litigation environment changes, new requirements will present themselves - requirements that could not have been anticipated when the litigation began. TCDI works with you every step of the way to ensure your system is continuously meeting the high and evolving demands of your case and trial teams.

SECURE USER ACCESS

ClarVergence for Case Management provides web-based access to centralized collections of case files and records. ClarVergence has a modular design that employs customized security groups and roles that will control what users can see and do on the system. As a feature and capabilities rich platform, ClarVergence offers users the greatest level of efficiency and productivity among the multiple case teams.

FLEXIBLE INTAKE IMPLEMENTATION

The intake features in ClarVergence are customized to meet your unique and evolving case needs. Whether deployed at a central intake point or spread among multiple sites or firms, the intake software ensures consistency of intake processes and coding. As the need of your case evolve, the software can be customized to reflect this inevitable evolution.
