# tcdi

TCDI has helped clients manage thousands of matters through our Litigation Management platform for over 30 years. We continue to work with our clients hand-in-hand to collaborate on the daily needs of their cases. Our drive to always remain innovative ensures a commitment to increased efficiencies through automation. This allows our clients to manage their cases day-to-day while ensuring cost efficiencies throughout the process, allowing for ease of use and customization. This includes case automation, evidence tracking, witness materials, pleadings, and all case materials from key documents to deposition testimony.
While most legal matters don't require a management system as robust as ours, we built CVLynx to be the most technologically advanced litigation case management system available. With the ability to scale up or down to meet the needs of your litigation, you will never have to worry about outgrowing your system.

We are not new to being pulled into highly-active, fast-paced litigation to implement solutions and support counsel and clients. We've nurtured deep and lasting relationships with corporations involved in highly complex matters in industries like Pharmaceuticals, Tobacco, Insurance, Manufacturing, Healthcare and Banking. We even developed and managed the litigation management system used by all parties in the World Trade Center Disaster Site Litigation.

# Real-Time Access to Case Data in a Single Repository

Often, the need to manage data for litigation does not happen in a silo. CVLynx for Litigation Management is part of a larger Comprehensive Data Architecture which seamlessly integrates with eDiscovery reviews and productions. It works in conjunction with data received from third-party records vendors, court reporters, filing systems, electronic billing systems, and other platforms.
