Flexible Solutions: Legal Technology That Works With You

At TCDI, we believe in working the way you want to work. That is why we remain platform agnostic, supporting both our own proprietary technology along with other industry-leading software. And we don't simply support them, we are experts in them.

From eDiscovery and litigation management tools to emerging technologies like GenAI, we give you the flexibility to be innovative while maintaining the control you need to be defensible. Because when technology aligns with how you work, everyone wins.

CVSuite: Experience the Power

CVSuite is a proven, all-in-one eDiscovery and litigation management solution that simplifies complex matters and integrates seamlessly with platforms like Relativity and Brainspace for greater flexibility and control.

cvlynx

Flagship litigation management & eDiscovery platform designed to handle relational data

cvfox

Secure SaaS-based version of CVLynx designed for rapid deployment

cvonyx

Modular data processing technology that provides deliverables compatible with CVSuite and other leading tools

cvunity

Enterprise legal management platform that unites data from disparate sources into one intuitive dashboard

Why Clients Choose CVSuite:

▶ Technology that has supported complex litigation and eDiscovery needs for nearly 25 years

▶ Platforms backed by dedicated development and support teams result in custom client features

▶ Robust data security with TCDI's on-site data center and annual SOC 2 Type II audits

Relativity: Enhance Your Instance with TCDI

As a **RelativityOne Silver partner**, TCDI helps clients maximize their use of RelativityOne and Relativity Server. With Data Migration and Security Best Practices competencies, we specialize in guiding clients moving to our environment and supporting Server users transitioning to RelativityOne.

Why Clients Partner with TCDI/Relativity:

▶ Direct access to our in-house development and support teams with experts holding over 50 Relativity certifications

▶ A Lean Six Sigma approach to optimize your Relativity instance and workflows

▶ A long-standing commitment to diversity and inclusion across our teams and partnerships

Process-Driven AI: Unlock Defensible Innovation

Just as we give clients choice and control across eDiscovery platforms, we take the same flexible approach to emerging technologies like GenAI. Rather than offering a single solution, our team evaluates each matter, starting with the outcome you want to achieve. We then work backward to select the technologies and processes that will deliver the most efficient and cost-effective results.

This may include GenAI technology, legacy AI tools such as TAR or CAL, established legal workflows, or a tailored combination designed to meet your goals. Depending on your needs, we will leverage our proprietary workflows and technology from our trusted partners:

Relativity aiR

Thomson Reuters™ CoCounsel

altumatim

tackleai The **logical** solution.

Why Clients Trust TCDI's AI Solutions:

▶ Development of tailored strategies that blend GenAI, legacy AI, and proven workflows

▶ Technology and partners are tested and validated by TCDI's Tech Lab before deployment

▶ Quality engineers validate results and continuously refine models for accuracy

▶ Processes are supported by Lean Six Sigma methodologies to ensure defensibility

SMART Data: Access Insights Before Review Begins

Our award-winning GenAI-powered processing workflow takes complex, messy information and makes it more structured, more searchable, and more decision-ready.

By applying intelligence at the point of processing, not during review, SMART Data gives legal teams insight at the earliest possible moment and sets a new standard for modern discovery.

How Clients Get Ahead with SMART Data:

▶ Gain insights into data sets before a single document is reviewed

▶ No interface to learn, no additional software to manage for end-users

▶ Exports are compatible with CVSuite and other leading platforms

SMART Images

Unlock image content by using multimodal OCR to extract text and create descriptions that allow reviewers to search and filter image files just like documents.

SMART Handwriting

Help uncover handwritten notes and annotations by improving detection and making more of this content available as searchable text during review.

SMART Translation

Use multiple dictionaries and AI models to translate over 30 languages during processing. Results read naturally and captures full meaning at the sentence and document levels.

SMART Summarization

Provide concise, accurate summaries that highlight themes, facts, and patterns across large document sets, helping reviewers focus on what matters most.
